

UTILIZATION MANAGEMENT MEDICAL POLICY

POLICY: Bone Modifiers – Zoledronic Acid (Zometa) Utilization Management Medical Policy

- Zometa® (zoledronic acid intravenous infusion – Novartis, generic)

REVIEW DATE: 03/09/2022; selected revision 10/19/2022

OVERVIEW

Zoledronic acid intravenous infusion (Zometa), a bisphosphonate, is indicated for the treatment of the following:¹

- **Hypercalcemia of malignancy.**
- **Multiple myeloma and documented bone metastases from solid tumors**, in addition to standard antineoplastic therapy.

Prostate cancer should have progressed after treatment with at least one hormonal therapy.¹ Another formulation of zoledronic acid intravenous infusion is available, Reclast®, but is not included in this policy.²

Other Uses with Supportive Evidence

Data are available with zoledronic acid intravenous infusion (Zometa) regarding off-label uses. One example is to prevent bone loss in patients with breast cancer receiving aromatase inhibitor therapy. Aromatase inhibitor therapy prevents peripheral production and suppresses estrogen levels and can lead to accelerated bone loss beyond what would naturally occur in women.^{3,4} This can place the patient at an increased risk for having a fracture. A review on the management of aromatase inhibitor-associated bone loss in postmenopausal women with breast cancer⁵ states that zoledronic acid intravenous infusion (Zometa) [4 mg every 6 months] is the preferred agent for prevention and treatment of aromatase inhibitor bone loss.⁴ Zoledronic acid intravenous infusion (Zometa) has been studied and shown benefits in postmenopausal women receiving adjuvant letrozole for breast cancer.^{5,6}

Zoledronic acid intravenous infusion (Zometa) has also been utilized to prevent bone loss in patients with prostate cancer who are receiving androgen deprivation therapy (ADT). ADT is associated with a variety of adverse events, including osteoporosis. The National Comprehensive Cancer Network (NCCN) clinical practice guidelines regarding prostate cancer (version 3.2022 – January 10, 2022)⁷ cite zoledronic acid as an option to increase bone density, a surrogate for fracture risk, during ADT for prostate cancer. Zoledronic acid intravenous infusion (Zometa) has led to bone mineral density increases in patients with prostate cancer who are receiving androgen deprivation therapy.^{8,9} A clinical practice guideline for osteoporosis in men from the Endocrine Society⁹ recommends pharmacological treatment for osteoporosis for men with prostate cancer receiving ADT who have a high risk of fracture.

Zoledronic acid intravenous infusion (Zometa) has utility in premenopausal patients with breast cancer who have developed ovarian failure. Chemotherapy-induced ovarian failure is an adverse effect associated with some adjuvant chemotherapy and can lead to rapid bone loss.^{10,11} Studies have demonstrated zoledronic acid intravenous infusion (Zometa) to be efficacious in preserving bone mineral density in premenopausal women with breast cancer who developed ovarian failure due to adjuvant chemotherapy.

POLICY STATEMENT

Prior Authorization is recommended for medical benefit coverage of zoledronic acid intravenous infusion (Zometa). Approval is recommended for those who meet the **Criteria and Dosing** for the listed indications. Extended approvals are allowed if the patient continues to meet the Criteria and Dosing. Requests for doses outside of the established dosing documented in this policy will be considered on a case-by-case basis by a clinician (i.e., Medical Director or Pharmacist). All approvals are provided for the duration noted below. In cases where the approval is authorized in months, 1 month is equal to 30 days. Because of the specialized skills required for evaluation and diagnosis of patients treated with zoledronic acid intravenous infusion (Zometa) as well as the monitoring required for adverse events and long-term efficacy, approval requires zoledronic acid intravenous infusion (Zometa) to be prescribed by or in consultation with a physician who specializes in the condition being treated.

Automation: None

RECOMMENDED AUTHORIZATION CRITERIA

Coverage of zoledronic acid intravenous infusion (Zometa) is recommended in those who meet one of the following criteria:

FDA-Approved Indications

-
- 1. Bone Metastases from Solid Tumors – Treatment.** Approve for 1 year if the patient meets all of the following criteria (A, B, and C):

Note: Some examples of cancer in this clinical scenario include breast cancer, prostate cancer, non-small cell lung cancer, renal cell cancer, small cell lung cancer, colorectal cancer, bladder cancer, gastrointestinal/genitourinary cancer, and head and neck cancer.

A) Patient has bone metastases; AND

B) Patient with prostate cancer must have castration-resistant prostate cancer; AND

Note: This includes patients who have progressed after treatment with hormonal therapy or after surgical castration (e.g., bilateral orchiectomy). Examples of hormonal therapies for prostate cancer include Lupron Depot (leuprolide for depot suspension), Eligard (leuprolide acetate for injectable suspension), Trelstar (triptorelin pamoate for injectable suspension), and Zoladex (goserelin implant).

C) Medication is prescribed by or in consultation with a hematologist or an oncologist.

Dosing. Approve 4 mg or less by intravenous infusion administered no more frequently than once every 3 weeks.

-
- 2. Hypercalcemia of Malignancy.** Approve for 1 month if the patient meets the following criteria (A and B):

A) Patient has a current malignancy; AND

B) Patient has an albumin-corrected calcium (cCa) \geq 11.5 mg/dL.

Dosing. Approve 4 mg given as a single dose intravenous (IV) infusion for up to two doses with the second dose given separated by a minimum of 7 days from the first dose.

-
- 3. Multiple Myeloma – Treatment.** Approve for 1 year if the medication is prescribed by or in consultation with a hematologist or an oncologist.

Dosing. Approve 4 mg or less by intravenous infusion administered no more frequently than once every 3 weeks.

Other Uses with Supportive Evidence

4. Prevention of Bone Loss (To Increase Bone Mass) in Patients with Breast Cancer Receiving Aromatase Inhibitor Therapy. Approve for 1 year if the patient meets the following criteria (A and B):

- A) Patient has breast cancer that is not metastatic to bone; AND
- B) Patient is receiving an aromatase inhibitor therapy.

Note: Examples of aromatase inhibitor agents include anastrozole, letrozole, and exemestane.

Dosing. Approve 4 mg or less by intravenous infusion no more frequently than once every 6 months.

5. Prevention of Bone Loss (to Increase Bone Mass) in Patients with Prostate Cancer Who are Receiving Androgen Deprivation Therapy (ADT). Approve 1 year if the patient meets the following criteria (A and B):

- A) Patient has prostate cancer that is not metastatic to bone; AND
- B) Patient must meet one of the following (i or ii):

- i. Patient is currently receiving androgen deprivation therapy; OR

Note: Examples of androgen deprivation therapies include Lupron Depot (leuprolide for depot suspension), Eligard (leuprolide acetate for injectable suspension), Trelstar (triptorelin pamoate for injectable suspension), and Zoladex (goserelin implant).

- ii. Patient has undergone bilateral orchiectomy.

Dosing. Approve 4 mg or less by intravenous infusion no more frequently than once every 3 months.

6. Prevention of Bone Loss (to Increase Bone Mass) in Premenopausal Patients with Breast Cancer Who Have Developed Ovarian Failure. Approve for 1 year if the patient meets the following criteria (A, B, and C):

- A) Patient is premenopausal; AND
- B) Breast cancer is not metastatic to bone; AND
- C) Patient received adjuvant chemotherapy that led to ovarian failure.

Dosing. Approve 4 mg or less by intravenous infusion no more frequently than once every 3 months.

CONDITIONS NOT RECOMMENDED FOR APPROVAL

Coverage of zoledronic acid intravenous infusion (Zometa) is not recommended in the following situations:

1. Coverage is not recommended for circumstances not listed in the Recommended Authorization Criteria. Criteria will be updated as new published data are available.
